METHOD FOR PRINTING A LABEL PAIR WITH
INFORMATION-BASED INDICIA PROGRAM (IBIP) INDICIA

ABSTRACT OF THE DISCLOSURE

5

A method for printing a label pair made up of a destination address label and a corresponding destination Information-Based Indicia Program (IBIP) indicia label on a label stock in a system for printing one or more labels uses a unique identifying mark for

10   each label of the label pair. The unique identifying marks allow a user to match a destination address label to a corresponding destination address IBIP indicia label. The software defines the method used to generate the unique identifying marks and the positioning of the labels with respect to each other.
